Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html). NOTE: This is a 'working draft' sequence. It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 66 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (19-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                     Direct Submission

CGI-69 polypeptides and polynucleotides useful for treating metabolic disorders including cachexia, obesity, diabetes and cancers -

Disclosure; Page 11-12; 107pp; English.

splice variant) nuclein acids and proteins are useful for diagnosing and treating metabolic diseases in humans, including obesity, cacheria and diabetes. Evidence for an important function for CGI-69 in modifying mitochondrial membrane potential in brown adipose tissue (BAT) is presented. The mouse orthologue of CGI-69 is up-regulated in cold-treated BAT. CGI-69 may be involved in cellular thermogenic uncoupling and, therefore, may be used to diagnose and treat specific perturbations in metabolic pathways. Altering the expression of CGI-69 through gene therapy provides a means of treating metabolic diseases, such as obesity or cachexia, or of increasing or decreasing body weight. Decreasing the or of increasing or decreasing body weight. Decreasing the activity of CGI-69 can be used to treat cachexia, tumours, cancers, viral infections and bacterial infections, while increasing its activity can be used to treat obesity, tumours, cancers, viral infections and bacterial infections (all claimed). Methods are The present sequence is that of cDNA encoding human CGI-69 (see AAMSOSTO). Various CGI-69 clones were isolated from human liver upon PCR amplification and cloning. Some diverged from the previously known CGI-69 sequence in that they encoded an 8-amino acid insert preceded by a W64L change, and were termed the 'long version' isoform or CGI-69. (see AAT71019). The invention relates to a novel characterization of CGI-69 as a mitochondrial carrier protein, the discovery of CGI-69. (and the discovery of the alteration of the mitochondrial membrane potential through overexpression of carboxyl FLAG-tagged CGI-69. CGI-69 (including also claimed for determining whether a compound up-regulates or down-regulates expression of a CGI-69 gene, and of screening for mutation in the CGI-69 gene.

The nucleotide sequences may be used for identification of various disorders such as cancer, for chromosome dentification, as chromosome markers and for numerous other diagnostic or research purposes. The uncoupling protein encoded by the nucleotide muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders, wounds, infectious diseases, thrombosis, arthritis, and infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   74 GCGCCGCACGAGCACCAGCCTAGAGCCAGGACTGAAGCTTCAAGATGGCTGACCAGGACC 133

which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cycostatic; hepatotropic; vulnerary; cardiatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antiniflammatory; antibacterial; antivinal; antichnugal; anticheumatic; antithrianamic. The sequences can be used for determining pathological conditions associated with an ORPX-associated disorder. The proposition to, or preventing or treating nucleic acids can be used to express ORFX proteins in gene therapy.

Control of a conditions associated with an ORPX-associated disorder. The proteins and nucleic acids may be used to treat cancers, or proliferative disorders, neurodegenerative disorders, neurodegenerative disorders, neurodegenerative disorders, neurodegenerative disorders, systemic tythematosus, severe combined immunodeficiency (SCID), AIDS, viral, expertension, hypothyroidism, cholesterol ester storage, systemic lupus cortinal hemoglobinuria, burns, wounds, bone and cartilage damage, concturnal hemoglobinuria, antiinflammatory disease; to enhance concurse the contraceptive.

Claim 1(a); Page 9-10; 107pp; English.

```
The present sequence is that of cDNA encoding human CGI-69L (see AMNSO569), a novel splice variant of human CGI-69. Various CGI-69 clones were isolated from human liver upon PCR amplification and clones where isolated from the previously known CGI-69 cloning. Numerous clones diverged from the previously known CGI-69 cloning. Numerous clones diverged from the previously known CGI-69 w44L change, and were termed the 'long version' isoform or CGI-69. The invention relates to a novel characterization of CGI-69, and the cut cochondrial carrier protein, the discovery of CGI-69L, and the discovery of the alteration of the mitochondrial membrane potential chrough overspression of carboxyl-FLAG-tagged CGI-69. CGI-69. Coloning splice variant) nucleic acids and proteins are useful concluding splice variant) nucleic acids and proteins are useful concluding splice variant) nucleic acids and proteins are useful concluding splice variant) nucleic acids and proteins are useful conceptly, cachexia and diabetes. Evidence for an important function of the colludar thermogenic uncoupling mitochondrial membrane potential in brown adipose tissue (BAT) is presented. The mouse orthologue of CGI-69 colludar thermogenic uncoupling and, therefore, may be used to diagnose and treat specific perturbations in metabolic pathways. CG activity of CGI-69 can be used to treat cachexia, tumours, cancers, a criming the expression of CGI-69 through gene therzapy provides a crivity of CGI-69 can be used to treat cachexia, tumours, cancers, activity can be used to treat obesity, tumours, cancers, viral infections and bacterial infections, while increasing its activity can be used to treat obesity, tumours, cancers, viral also claimed for determining whether a compound up-regulates or a mutation in the CGI-69 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CTGAAGCTTCAAGATGGCTGACCAGGACCTGCGGGCATCAGCCCCCCTCCAAGAAATGGT 164
